Subject: ASPECT report West Texas Fertilizer Fire, Updated Version 2

All,

Please find an updated version (V2) of the West, Texas Fertilizer Fire report. I have included additional details on the ammonia detection, overall detection limits and the inclusion of concentration data in ppm (volumetric). We are getting ready to go back up and collect additional data and aerial photos. We should be airborne in about 30 to 45 minutes based on the improving weather.

Please let me know if you have any questions.

Mark
